## Risk Rating Guide

Below is a simple guide to help risk assessors determine the risk rating of each hazard identified.

A Risk Assessment should be 'Suitable and Sufficient'. That is to say:

- ◆ It should identify the risks arising in connection with the activity.
- ◆ The level of detail included should be proportionate to the risk.
- ◆ It must consider all those who might be affected i.e. staff, students, etc.
- ◆ It should be appropriate to the activity and should identify the period of time for which it is to remain valid.;

### Risk = Likelihood X Severity

| Likelihood    |   |
|---------------|---|
| Very Unlikely | 0 |
| Unlikely      | 1 |
| Possible      | 2 |
| Likely        | 3 |
| Very Likely   | 4 |
| Certain       | 5 |

| The Severity |                                                                                                                                                                                                                                           |   |
|--------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---|
| No Action    | No injury                                                                                                                                                                                                                                 | 0 |
| First Aider  | Bruising, minor cuts, grazes                                                                                                                                                                                                              | 1 |
| Doctor       | Strains, Sprains, concussion                                                                                                                                                                                                              | 2 |
| A & E 1      | Loss of consciousness, blood loss, burns, breaks or injury resulting in Visit to A&E. Other non-permanent chemical effects. Corrosive toxic, flammable substances, mild chemical irritation of eyes or skin. Harmful, irritant substances | 3 |
| A & E 2      | Permanent /partial/total disablement or other reportable injury/disease                                                                                                                                                                   | 4 |
| Death        | Single Death or Multiple Death                                                                                                                                                                                                            | 5 |

| Likelihood    | Severity |      |      |            |             |           |
|---------------|----------|------|------|------------|-------------|-----------|
|               | Death    | A&E2 | A&E1 | Nurse Unit | First Aider | No Action |
| Certain       | 25       | 20   | 15   | 10         | 5           | 0         |
| Very Likely   | 20       | 16   | 12   | 8          | 4           | 0         |
| Likely        | 15       | 12   | 9    | 6          | 3           | 0         |
| Possible      | 10       | 8    | 6    | 4          | 2           | 0         |
| Unlikely      | 5        | 4    | 3    | 2          | 1           | 0         |
| Very Unlikely | 0        | 0    | 0    | 0          | 0           | 0         |

| Risk Rating      | Score   | Action                                                                                                                                                                                                                 |
|------------------|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Trivial Risk     | 0 - 2   | No further action required unless incidents occur                                                                                                                                                                      |
| Low Risk         | 3 - 4   | No additional controls may be needed overall, but specific hazards may be reduced. Monitoring is required to ensure controls are maintained. Review if an incident occurs or more effective controls become available. |
| Moderate Risk    | 5 - 10  | Efforts should be made to reduce the risk over a defined period of time.                                                                                                                                               |
| High Risk        | 12 - 16 | Work should not be started until the risk has been reduced. If work is in progress Urgent action should be taken to reduce or control risks.                                                                           |
| Intolerable Risk | 20 - 25 | The activity should cease until risks have been reduced to an acceptable level.                                                                                                                                        |
